

Margin Review

March – May 2026 · all marketplaces · prepared for Product, Procurement & Marketing

Note: 1 one-off adjustment(s) applied — see methodology box on the last page.

Net sales	Contribution Margin 3	Blended CM3%	Active SKUs
€7,308,458	€982,689	13.4%	223

Why we're meeting

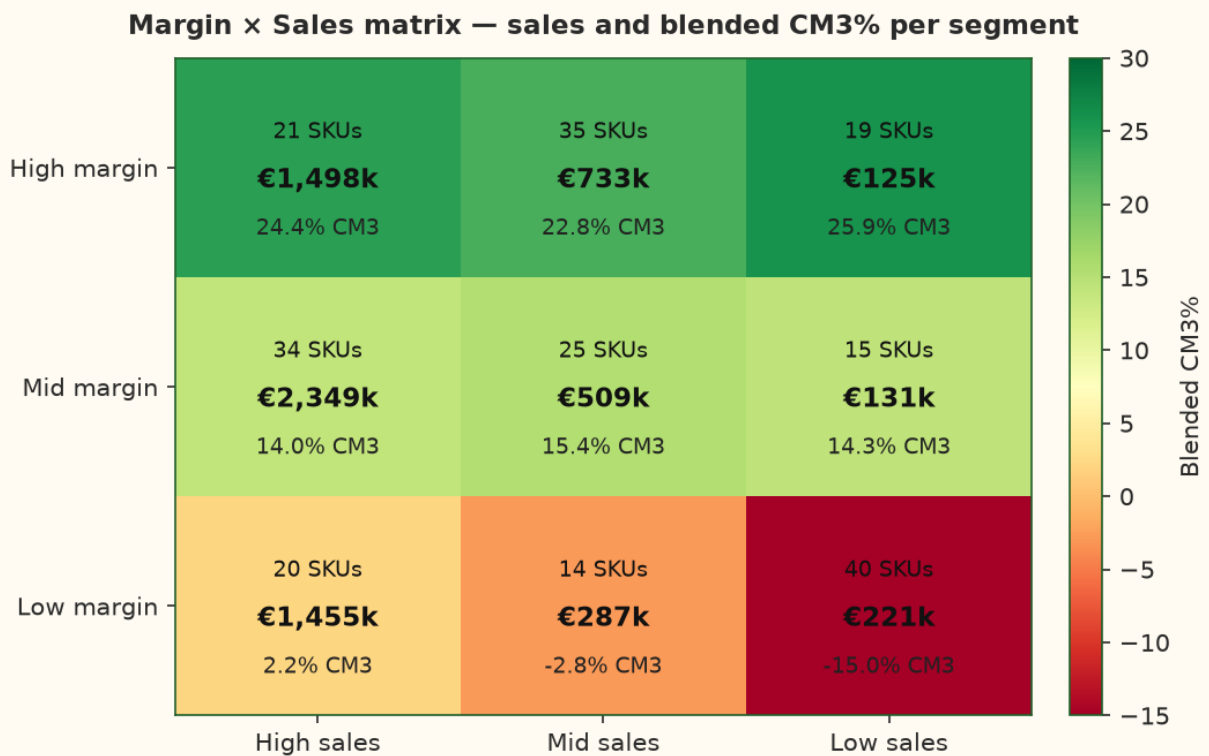

Over March – May 2026 the catalogue generated **€7,308,458** in net sales at a **blended CM3 of 13.4%** — well below the 19.7% target. The headline gap is concentrated, not spread evenly: a small group of high-revenue, low-margin SKUs is diluting the whole portfolio, while a healthy high-margin core is being under-scaled. This preread frames four product segments and the biggest month-over-month margin movers so Product, Procurement and Marketing can align on where to act first.

Headline takeaways

- **The margin drag is concentrated.** 20 'low-margin / high-sales' SKUs turn over €1,454,536 (20% of sales) at just 2.2% CM3 — they earn €32,123 of contribution. Fixing these is the single largest lever.
- **The profitable core is solid but small.** 21 'high-margin / high-sales' SKUs deliver €365,827 of CM3 at 24.4% — protect price and availability here at all costs.
- **There is untapped upside.** 19 'high-margin / low-sales' SKUs already run at 25.9% CM3 but only €125,474 of sales — a marketing / merchandising scale opportunity with no margin risk.
- **Margins are trending down portfolio-wide.** Blended CM3 fell from 13.1% in Mar to 14.5% in May; the bottom-10 decliners (p.4) explain most of the slide.

Margin × Sales matrix

Every SKU is placed in a 3×3 grid: thirds by all-country CM3% (margin) and thirds by all-country net sales (volume). Cells show SKU count, total sales and the segment's blended CM3%.

Tier cut-offs (terciles): margin at 9% and 18% CM3; sales at €13,804 and €30,774 over the three months.

The four segments to discuss

Each segment lists its five most P&L-relevant SKUs — for the high-margin segments these are the biggest CM3 contributors; for the low-margin segments, the biggest CM3 drains. The prompts are starting points for the room, not fixed actions.

Low margin · High sales

20 SKUs | €1,454,536 sales (20% of total) | blended margin **CM1 57.2%** › **CM2 23.7%** › **CM3 2.2%**

Biggest lever — high volume at thin or negative margin. Where is the margin going: landed cost, fulfilment, or discount/ad spend? Which of these are structural vs. fixable, and which is volume worth keeping at all?

Product	P&L (CM3 €)	Sales	CM1%	CM2%	CM3%
Vegavero Magnesium Bisglycinate 400 mg E	€-30,242	€230,063	62.8%	27.3%	-13.1%
Bromelaine Pure 1300 mg Vegavero® Dosage	€-3,961	€55,134	54.0%	20.4%	-7.2%
Citrato de Magnesio 400 mg de Magnesio E	€-2,357	€35,129	59.6%	29.5%	-6.7%
Vegavero Vegan Omega 3 Algae Oil DHA & E	€-2,174	€47,737	50.1%	19.8%	-4.6%
Serenoa Repens 900 mg 180 capsules (3 ma	€66	€48,851	52.0%	19.4%	0.1%

Low margin · Medium sales

14 SKUs | €286,886 sales (4% of total) | blended margin **CM1 59.5%** › **CM2 26.1%** › **CM3 -2.8%**

Watch list — weak margin before they scale further. Are these on a path to the high-sales / low-margin trap, and what would it take to turn the margin before they grow?

Product	P&L (CM3 €)	Sales	CM1%	CM2%	CM3%
Green Supreme Polvere Vegana Superfood,	€-6,576	€22,664	58.5%	31.5%	-29.0%
Zinc Bisglicinato 25 mg Puro Sin Aditivo	€-3,968	€22,051	62.7%	29.9%	-18.0%
Tegument Psyllium Blond BIO 99% de Puret	€-1,783	€23,089	60.5%	25.8%	-7.7%
Vegavero Vitamin B12 Tablets 1,000 µg 18	€-1,352	€21,206	64.5%	30.7%	-6.4%
Rapunzel Haar Vitamine mit MSM, Biotin,	€-983	€25,819	61.9%	28.5%	-3.8%

High margin · Low sales

19 SKUs | €125,474 sales (2% of total) | blended margin **CM1 65.9%** › **CM2 36.6%** › **CM3 25.9%**

Scale opportunity — strong margin, under-exposed. What is capping demand — visibility, content, availability, price? Where could extra investment pay back given the healthy margin?

Product	P&L (CM3 €)	Sales	CM1%	CM2%	CM3%
wowtamins Kids Complete - Vegane Multivita	€3,596	€8,143	79.5%	54.0%	44.2%
Vegavero Iron Supplement NO Additives	€3,540	€9,115	53.6%	41.3%	38.8%
Vegavero ZM+ capsules Zink, magnesium, v	€3,121	€11,472	69.5%	37.1%	27.2%
IPERICO BIO 500 mg Vegavero® con PASSIFL	€3,058	€13,098	62.9%	29.0%	23.3%
wowtamins Kids Multi Gummies zuckerfrei -	€2,479	€8,606	81.8%	53.9%	28.8%

High margin · High sales

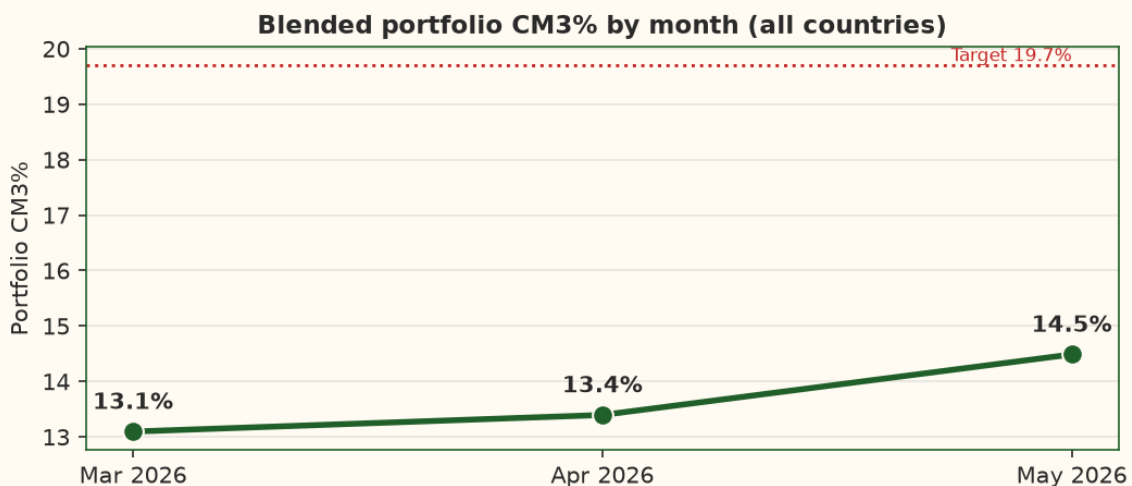

21 SKUs | €1,498,391 sales (21% of total) | blended margin **CM1 67.2%** › **CM2 34.0%** › **CM3 24.4%**

Protect — the profit engine of the catalogue. What are the risks to these (price pressure, stock-outs, competitor entry), and how much headroom is there before margin erodes?

Product	P&L (CM3 €)	Sales	CM1%	CM2%	CM3%
Vegavero Glycine Powder 1000 g 100% Pure	€88,206	€366,245	71.2%	32.4%	24.1%
Vegavero Organic Moringa Oleifera Tablets	€27,452	€60,237	77.3%	62.3%	45.6%
Vegavero Saffron Supplement 90 mg High S	€24,378	€122,827	57.8%	26.5%	19.8%
Vegavero Myo-Inositol & D-Chiro Complex	€23,451	€122,599	63.9%	34.5%	19.1%
Vegavero Kudzu 6000 mg Quit Smoking & Ha	€20,690	€80,856	67.2%	33.9%	25.6%

Margin trend — biggest movers

Ranked by CM3% change from March to May per SKU (all-country, sales-weighted linear fit), limited to SKUs with at least €10,000 of net sales over the window. CM1% and CM2% are the period-blended levels for context — comparing them with the CM3 trajectory shows whether a move came from COGS (CM1) or from fulfilment / ad cost downstream.

Slow movers — Days of Supply > 180

30 SKUs have more than six months of FBA stock at current sales velocity, of which **11** exceed twelve months (critical overstock). Together they tie up roughly **€2,859,700** of capital at cost (FBA units × COGS/unit, where COGS = Sales – CM1 — not retail value) across 275,529 FBA units. Days of Supply = FBA Available ÷ Sales Velocity (units/day), with both totals summed across marketplaces.

Tied-up value ≈ FBA units × COGS/unit (COGS = Sales – CM1 over March–May), i.e. capital sitting in unsold stock at cost — not retail value. Sales / CM3% are this SKU's Mar–May economics for context. DoS values shown in red exceed 360 days (a year of stock).

Manual adjustments applied

SKU	Adjustment note	Adjusted CM3
VV-VITA-266	Return-spike normalisation: May 2026 absorbed 4,068 unit returns and €91,873 in refunded product sales — vs a 1.7-2.2% baseline return rate in Mar/Apr. The spike is a catch-up of returns from earlier periods, so the abnormal portion is adde...	€27,452 (45.6%)

Method & scope: Novadata daily margin + products exports, all marketplaces. CM3 = contribution margin after product, fulfilment and ad costs. Segments use within-period terciles; trend is a sales-weighted fit of monthly CM3%. Sub-€10k SKUs excluded from leaderboards. Days of Supply derived from FBA Available ÷ Sales Velocity. Manual adjustments listed above are read from *adjustments.json* at build time and are NOT written back to the Novadata source data.
